

IMPROVE SOILS

ENHANCE EFFICIENCY

MAXIMIZE YIELD

Value-Added Nutricor[®] Gives You More

Nutricor is a concentrated, value-added 5-4-4 plus 3 percent sulfur liquid fertilizer. It delivers key nutrients and select organic materials, as well as multi-sourced carbon and chelated micronutrients to your crops.

With Nutricor, you'll see increased growth and profitability in the short term—and improved soil in the long term.

Nutricor will:

- Build aggressive roots for better stress tolerance.
- Maximize yield and quality through stronger, healthier roots, stalks and leaves.
- Reduce soil salts for better water use—particularly where poor quality irrigation water or salt-based fertilizers have been used.
- Help reduce nutrient runoff by helping soils more easily absorb and hold water.

Healthy Soil Builds Healthy Plants

While conventional fertilizers generally provide nutrients for plants, Nutricor also provides non-plant food additives to help improve the quality and bioactivity of that soil.

Organic material helps improve your soil structure. Carbon helps boost soil microbe activity. Together they contribute to productive, open, reduced salt soil for better water penetration and increased water flow through the root zone, enabling greater water and nutrient uptake by your plants.

Nutricor's nutrient package can then reach your plants more efficiently. You'll see a larger, more aggressive root mass. You'll see a healthier, more productive plant that's better able to withstand weather, insect and disease stresses.

And best of all, you'll see an increase in your yield and crop quality.

Nutricor Includes:

- **Boron (B)**, essential for cell division, cell growth, seed set and proper fruit development
- **Carbon (C)**, important in encouraging microbial growth in the root zone, helping make all nutrients more plant-available
- **Copper (Cu)**, needed for key plant enzymes
- **Iron (Fe)**, important for chlorophyll development and plant growth
- **Manganese (Mn)**, used in photosynthesis
- **Molybdenum (Mo)**, vital in nitrogen fixation by legumes and critical for nitrate use in plants
- **Zinc (Zn)**, necessary for key plant enzyme activity
