NutriMend™

Mend and Restore Your Soil Back to Health

The name NutriMend® says it all. It mends and restores your soil's health by providing the nutrition and low pH required for long-term sustainability.

NutriMend® 10-3-0 Plus Calcium and Micronutrients is primarily intended as a soil treatment supplying nitrogen, phosphorus and chelated micronutrients, along with water-soluble calcium and multi-sourced carbon. It helps reduce total soil salt levels and improves the overall health and function of your soil structure. It should be applied as a pre-plant application with follow up applications as necessary or desired.

With NutriMend®, you'll boost better yields and profitability in the short term—and improved, healthy soil in the long term.

Micronutrients Play A Macro-Role In Soil Health

A balanced blend of both macro- and micronutrients is foundation for a healthy soil environment. NutriMend's chelated micronutrients keep your soil nourished and productive, providing the balanced environment microbes crave for optimum proliferation. All the micronutrients necessary are included in this formulation.

While improving the health and function of your soil, you'll also reach your plants more efficiently with NutriMend's nutrient package establishing a larger, more aggressive root mass. This results in healthier, more productive plants better able to withstand weather, insect and disease stresses.

The Importance of Soil Management

Today, leading producers use soil management strategies to improve fertility, maximize resources and yield, and reduce ecological impact. Soil management techniques include nutrient management, reduced tillage, crop rotation and cover crops. However, these measures aren't always enough to bring soils back to optimum levels.

That's where Solutions 4Earth can help. NutriMend joins a full lineup of environmentally friendly products that create balanced and sustainable agricultural environments.

NutriMend® Delivers:

- **Nitrogen and Phosphorus – two critical nutrients for plant and microbial growth for maximum soil health.**
- **Soluble Calcium – improves crop production by helping offset sodium accumulation, mending soil structure and ultimately restoring root health.**
- **Humic – enhances soil health, delivering positive effects on plant growth.**
- **Carbon – multiple sources encourage microbial proliferation and provides the energy your soil needs.**
- **Acidic formulation – neutralizes bicarbonates and carbonates; helps decrease soil Ph and assure nutrient availability, and keeps drip lines clean.**
